“VITAL FORCE”

BY

PRATIK ARVINDBHAI BARVALIYA

SUBMITTED TO THE

SAURASHTRA UNIVERSITY

DISSERTION SUBMITTED TO

SAURASHTRA UNIVERSITY

AS A PART OF FULFILLMENT OF THE RULES AND REGULATION

FOR THE AWARD OF DEGREE OF **B.H.M.S.**

UNDER THE GUIDENCE AND SUPERVISION OF

DR.

PERFORMED AND PREPARED BY STUDENT

PRATIK ARVINDBHAI BARVALIYA

OF SMT.VASANTBEN N. VYAS HOMEOPATHIC MEDICAL COLLAGE & HOSPITAL, AMRELI.

CERTIFICATE

THIS IS TO CERTIFY THAT WORK CONTAINED IN THIS DISSERTION ENTITLED

" VITAL FORCE "

IS A BONAFIED WORK CARRIED BY

PRATIK ARVINDBHAI BARVALIYA

DURING HIS ACADEMIC YEAR AS A PARTIAL FULFILLMENT OF THE REGULATION FOR THE AWARD OF DEGREE ***"B.H.M.S."***

THE ABOVE WORK CONFIRMS THE STANDARDS OF THE

SAURASHTRA UNIVERSITY ,RAJKOT

IT HAS NOT SUBMITTED IN FULL OR PARTIAL FOR THIS AWARD OF ANY OTHER DEGREE OR DIPLOMA

PRINCIPAL **SIGNATURE OF GUIDE**

SMT.VASANTBEN N. VYAS **DR.**

HOMEOPATHIC MEDICAL COLLAGE,

AMRELI.

DECLARATION

I undersigned that Barvaliya Pratik Arvindbhai , a student of intern Doctor, during the Academic year 2015-16 of,

smt,Vasantben N, Vyas Homeopathic Medical Collage, Amreli., Declare that dissertion entitled as:

VITAL FORCE

Submitted by me is not submitted fully or partially for the award of any degree of Any other university by me or copied from any other dissertion work .

The statement is made by me to the best knowledge and ability.

Place :

Date :

Students signature

1.DEFINITION

"Vital force can be defined as an autocratic, autonomic, spirit-like, unintelligent, dynamic, instinctive, a life-preserving force that animates the material body".

1.DEFINITION

"Vital force can be defined as an autocratic, autonomic, spirit-like, unintelligent, dynamic, instinctive, a life-preserving force that animates the material body".

Explaination:

1. It cannot bring together the gaping lips of a wound and affect a cure.
2. It cannot straighten and adjust the broken ends of a bone.
3. It cannot put a ligature on a wounded artery, but in its energy causes the patient to bleed to death.
4. It does not understand how to replace a dislocated shoulder, but by the swelling it produces, it presents an obstacle to reduction.
5. In order to remove a foreign body from the cornea, it destroys the whole eye by suppuration.

The vital force is not guided by reason, knowledge and reflection, and was not given to man as the best possible curative agent to restore deviations from health to the normal state.

Intensity of symptoms reduced and gradually vital force covers its own After studied so many philosophy the pioneers of homeopathy says that every living individual has a vital force inside his body which regulates the human body which cannot be seen but can be perceived. It is in the form of energy which is regulates the body in a systematic mannerwhen is in healthy state but if any exciting or maintaining factors interrupt this it shows some symptoms in the form of a disease and vital force is weaker in the body because of the disease. when a homeopathically medicine is administered in the body or removal of the symptoms takes place vital force regains its health and physiological process of a human being goes in a harmonious manner.

As per studied various literature and previous researches we can assume that vital force is an energy which cannot be calculated but it is present in the body which regulates the body and covers its path in a regular motion when in healthy state we consider it in the form of pendulum, spin, rotating objects etc. if a force is applied on it will increases his speed or may be decreases according to the motion or force applied on it. it has a regular motion which is in there healthy state when some disturbance is created it may be decreases or increases its rotation which can be seen in terms of symptoms which present at physical or mental level or may be physiological or pathological which is all based on patients susceptibility. When a homeopathic well selected remedy is administerd it will affect the vital force in the form of energy which is called potency in homeopathy and remedy is called force. So the vital force which shows some disease symptom or divert from his own path will recover by the help of medicine administered and intensity of symptoms reduced and gradually vital force covers its own.

path in a regular manner and patients is cured. We can also say that some high technology will calculate the energy and how this whole process is going on in the body will be measured because our homeopathically medicines are diluted in nature and it is in the forms of nano particles. We can also say that homeopathy is not placebo it has medicinal effect which is highly diluted & considerd in terms of small particles or energy. As per the previous studies they compared homeopathy, vital force with the new models in the physics, mathematics & modern science which takes several years to prove and it needs to be working on it. So we can say that we needs to improve our technique and studies with the modern technology in new era.

2.HISTORY

The idea of the vital force is a central concept in homeopathy,developed by Hahnemann.

Being a most competent scientist, he elaborated his concepts based on objective observations. He refused abstract theories as being of no use for the purpose of healing. Hahnemann adopted the motto of enlightenment ***'Audesapere'*** for his Organon of the Healing Art.

The idea of a special vitalforce has been disdained by scientists and philosophers after Hahnemann. However, science of the 20th century has shown the limits of the materialistic paradigm and brought up new approaches (nonclassic physics, genetics, philosophies embracing wholeness).

On the background of these developments of science and philosophy, a critical analysis will be made of Hahnemann's idea, asking if it can be called a fiction, a construct or a reality.The focus is on Hahnemann's special concept of the vital force. It will not be equated with vitalism in advance. Effects of disease agents or remedies are not considered. The gap between rhetoric and reality of Hahnemann's idea, as well as its implications on homeopathic treatment, is discussed.

Hahnemann outlined his understanding of the invisible inner nature of the disease and the totality of symptoms as its outer image in first publications on the Law of Similars. However, he introduced his idea of the vital force only by the 4th

edition of the Organon, in temporal relationship with his research on chronic diseases and in close relation to this concept.

Vital force explain the existence of an animating invisible energy in the universe, whereas vital principle is a special kind of power possessed by the material body. According to Dr. Hahnemann, the term ***"vital force"*** introduced first time in the 5th edition of organon of medicine and it is replaced by the term "vital principle" in the 6th edition of organon12 Because of the Vital force material body can survive, grow, reproduce, without which the anatomical body cannot perform any function and cannot protect itself from decays. It is a spirit like dynamic.

Vital force is a type of energy with which life is preserved. This energy is present in each & every part of the body. It is the basic factor responsible for keeping the body in an animated state during health & disease. It cannot be seen with the naked eyes its function in a harmonious manner says that it is in state of health. So many controversies against this concept that it is nothing. But recently so many work is done to check its viability in the body and how body is functioning in a harmonious way in healthy state. In the recent studies concludes that some energy is there in the body but the techniques to calculate this will be lacking .Before 200 yrs back master Hahnemann clearly said that it is the energy by which body perform its physiological functioning.

3.CONCEPT OF VITAL FORCE

Dr. Hahnemann discovered that the human body is endowed with a force that reacts against the inimical forces, which produce disease. It becomes deranged during illness. Such reactions of the deranged vital force are the cause for the externally expressed signs and symptoms. Dr. Hahnemann has described the concept of vital force in aphorisms 9 to 17 in the Organon of Medicine. Literally speaking "vital" means essential and "force" means energy or power, thus vital force means ***"essential energy"*** or ***"energy that is essential for life".***

The theory of Vital force in homeopathy is a unique philosophy which accepts the existence of a spirit like energy that drives the living organism both in health and disease. This concept has nothing to do with any religious beliefs, but postulates that life is not the mere collection of blood, bone and muscles or a living cell is not just some cytoplasm, mitochondria, nucleus, DNA and RNA.

Homeopathy believes that there is an existence of an essential force in every living organism which maintains harmony of the functions and also differentiates the living from the dead. The vital force determines the state of health in that living organism, at mental, physical and spiritual levels.

Based on similarity between the signs and symptoms of disease and that observed of the drugs during drug proving, homeopathic medicine selected and administered, stimulates this failing vital force so that, as Hahnemann said, ***"it can again take the reins and conduct the system on way to health".*** Signs and symptoms reveal not only the disturbance within an organism which is usually called the ***"dis-ease"*** but also curative remedy, which will set right the problem. In

homoeopathy, there is a critical disapproval of all practices aimed at suppression of the manifestation of the disease such as a discharging skin eruption, longcontinued diarrhea or naso-bronchial excretions as they are often dangerous. Earliest beginning of diseases, much before structural changes in the cells (a diagnosis), could be understood from the symptoms.

Homoeopathic treatment carefully adopted from the time of conception, pregnancy and early formative years of the child claims to free the child of the bad effects of hereditary influences and prevents various types of constitutional disorders in later life.

Example 1: Digestion

The first example of normal digestion brings into focus the enormous capabilities the Vital Force has in responding to each event we experience. Once we make a decision to eat a meal, your Vital Force controls the process of digestion that breaks down each bite of food into small, individual particles. It does this through a process of creating just the right chemicals to break down the food, but yet it spares the digestive track itself from the process of digestion. Even though some foods may be quite similar in their nature to the digestive track, only the food is digested.

Once digestion is complete, an assessment of each food particle is made. Those particles that are useful are taken into the body and all those particles that are not useful are left to pass through. Those particles taken in become the substances of which you are made. In any one meal, the number of decisions made about individual particles is a quite large number but this process is completed with each meal with good accuracy.

As the useful food particles enter into the physical body, their usefulness is directed to specific metabolic pathways that are equally efficient in making immediate use of some and saving others for later use. The specificity and efficiency of the digestive process is quite amazing. It does all that is needed and no more. It even controls the internal environment of the GI tract to take use of the efforts of symbiotic bacteria to spare you the need to do the part of the digestive process that the bacteria can do for you.

Example 2: Breathing

Breathing helps to draw a contrast between the Vital Force and conscious mind as they each contribute to state of health or disease.

If number of times; breathe in a minute and it multiply by the number of minutes in a day, it multiplies out around 20,000 breaths each day. Each one of those 20,000 breaths miraculously comes at the right time and in the right volume to maintain the gases in lungs at the ideal concentration for health.

Breathing function continues without needing any contribution from conscious mind. The Vital Force adapts rate of breathing to the current needs of the body for oxygen. The Vital Force also controls the process of delivering oxygen to every one of trillions of cells in exactly the right amount and at the right time. The Vital Force also removes the carbon dioxide gas from each cell as needed. All this control is accomplished outside of the conscious mind.

Actually, the main way for disorder the ideal breathing process is with the mind. mind could make a decision to stop breathing or hold your breath. If ever seen an obstinate child hold his breath, because it doesn’t work for long. The Vital Force will overpower the mind and force him to breathe or have him pass out and resume

breathing. The Vital Force will take over and adjust the rate of breathing to correct for the error imposed by the mind.

Similarly, if a person has an anxiety attack they may hyperventilate or just decide that breathing is good for the body and breathe too deeply and too fast. This decision of the mind is again not creating the ideal state of health and the Vital Force will soon enough bring about a corrective action and bring the rate of breathing back into a healthy state.

You can trust your Vital Force to always be there to optimize your state of health. It is always available to us to control all physical and mental-emotional functions in an ideal manner. The actions of the Vital Force stands in contrast to the conscious mind whose thoughts and actions can either benefit or harm your health.

Vital force and death:-

1. The body needs constant flow of regulated' energy hold the biological material body together. The vital force maintains the normal functioning of the body parts,

2. To retain means ***'to hold together'***. Otherwise, the unity degenerate, they fall apart. In the absence of autocratic, supreme, ruling Vital Force, the material body would disintegrate.

3. Without the vital force, the material body cannot have any sensation, function, and self-preservation.

4. Hahnemann adds another quality self-preservation. A constant flow of energy is essential to preserve the organic system Biological systems degenerate without the influx of energy.

5. Without the vital force, the material body is dead and decays into its material chemical constituents.

Vital force and derangement:-

1. The primary derangement of the dynamic vital force by the dynamic action of an inimical morbific agent constitutes **DISEASE**.

2.The derangement of the vital force is manifested and expressed through disagreeable sensations and symptoms. This invisible power can be recognized only by its effects on the organism. The morbid derangement makes itself known by the manitestation of disease only in the form of altered sensations and functions, by morbid symptoms.

Vital Force in Cure of Artificial Chronic Disease:-

If the vital force has not already been to much weakened by the mischievous acts of the allopathic non-healing art, the artificial chronic disease must be remedied by the vital force itself when it remain undisturbed for several years (appropriate medicinal aid may be given for the eradication of chronic miasm, if any lurking in the background).

PRACTICAL UTILITIES OF VITAL FORCE:-

1. It helps to perceive the dynamic nature of life, its actions and reactions which surmount the mere physical and chemical actions and reactions.
2. It helps to understand the dynamic concept of health, disease and cure.
3. It helps to understand the person as a whole both in health and disease holistic concept of man.
4. It helps in to individualise each person from others.

4.PRODUCTION OF THE VITAL FORCE

One way to produce most of the vital force is by the management of all the organs of the body, in the supply of the wants, in the use of the energies, in the action of the brain and the muscles, in the discipline and the indulgence of the passions and propensities, and in all the circumstances with which a man surrounds himself, there is, in regard to each, only one way by which the greatest quantity of vital force is produced, health and strength maintained in their highest degrees, and life enjoyed in its widest expansion: and it requires watchfulness to discover that path, and unfaltering discipline to walk in it; because " strait is the gate, and narrow is the way, which leadeth unto life" –perfect physical as well as spiritual life-« and few there be that find it."

As in some mountain of regular acclivity there is a point of elevation which is higher than all the rest, and from which all divergence is descent, and he that would stand the highest must place himself there, and if he depart from this point, to the right or the left, he goes downward -it may be but a hair-breadth, but it is none the less certainly to that extent downward so, in the maintenance of any one's life, there is a line of conduct which is above and better than all others; and there alone can he enjoy the largest amount of vitality, for there alone is the greatest amount of vital force produced; and any departure from this line, however small, is inevitably followed by a corresponding depression of life. It may be but an infinitesimal of an error, but precisely to that extent is the vital deterioration.

We can approach this line of highest health Or the most perfect action and largest power only by the most faithful compliance with the laws of nature, and the

complete adaptation of the material to the wants of life, and of the exertions to the powers of action. The law of adaptation and fitness is as imperative in regard to the vital machinery, and to the composition of the materials of life, as it is in regard to the machinery of dead matter, or the composition of dead mixtures. These are perfect, in their operations and effects, in proportion to the niceness of their workmanship,or the skill and success in their adaptation.

EVERY ERROR IN LIFE PRODUCES ITS PROPORTIONATE DIMINUTION OF VITAL FORCE :-

The laws of life are as fixed as the laws of matter. Cause and consequence, in exact relation and in inevitable succession, are as inseparably connected in one as in the other. In life, there is no effect without a corresponding cause. In any definite organization, the quantity of vital force which is generated, the amount of health, strength, and enjoyment, which is obtained, are in mathematically exact proportion to the fulfilment of the conditions of life.The fulfilment of any condition is inevitably followed by a corresponding degree of vital power, and any failure in regard to any condition - any error, however slight is as certainly followed by a corresponding loss of power, or a proportionate diminution of vital force.

The capital of life, and capital in trade, are both subject to somewhat similar conditions. Both need certain discretion in management; both are sustained, and even increased, by faithfulness to their conditions; and both are diminished by every error. As, with the merchant, every disadvantageous investment, every neglect of the means of due profit, every expense in the conduct of business beyond what is necessary for its success, and every other expenditure beyond the income, lessen the amount of his pecuniary capital; so, every neglect of the due means of recuperating

life, every failure of proper food, in time or in quantity, every tax up on the digestive organs beyond what the nutrition of the body requires, every inhalation of weakened or vitiated air, every excess of labor by muscle or by brain, every privation of sleep, all expenditure of power beyond the average daily strength –each one of these, whether great or small, diminishes, in its proportionate degree, the vital capital.

EFFECTS OF ERRORS ACCUMULATE:-

With the merchant, the effect of small and repeated pecuniary losses is accumulative; and, however little they may attract attention, yet, after many repetitions, for a long period, they compel him tofeel them in the diminution of his capital, perhaps in embarrassment. So, the consequences of errors in the management of life accumulate; and, at last, are felt in the slackened energies, perhaps in failure in some of the functions, in some marked debility, or acknowledged disease.

The unfortunate merchant may refer his embarrassment to some recent loss, to some absconding debtor, or to some shipwreck or fire; but if his estate had not been impaired by his previous and repeated losses, which had been individually too small for his notice, the last and perceptible loss might perhaps have been easily borne.

So, the man who, however slightly but perseveringly, errs in diet, at last becomes dyspeptic.He may not be a gourmand, yet he may be rather a free or merely a careless liver, and eat that which is not digested with perfect ease, or he may consume a little more food than his nutrition requires; he may repeat this for months, perhaps for years, without teeling any especial inconvenience. But after

a long period, he begins to feel somewhat oppressed after his meals, and his oppression gradually increases, yet so slowly that he hardly recognizes its

advancement, and refers it to no assignable cause.Yet, at last, he is compelled to see and acknowledge the connection between his diet and his suffering;

and then he wonders that his free or thoughtless habits of living, which had been harmless and agreeable, should now become oppressive and injurious.

Some farmers, mechanics, and other laborers, over task their muscular systems during the early and middle periods of life. They work twelve, thirteen, fourteen, and some more, hours a day, and expend more power in each day than they regain in the night. They continually overdraw their income of strength, and expend from their capital; until, at last, they can no longer make this extraordinary exertion; and then they are obliged to select lighter employments, for, before they are old in years, they are decrepit in power, because they have expended their capital of life too early.

In like manner, the ambitious student may over step the average power of his brain, and give a little more time daily to his mental labor, than his nervous system can bear; or exhaust so much nervous energy in the operations of the mind, that there is not enough left to sustain the physical functions. He may carry on this exhaustive process for years, without seeming to suffer, until the accumulated consequences of his repeated errors become perceptible; and then he is manifestly an invalid, perhaps dyspeptic, and his brain is unable to do its accustomed work.

5.STRENGHTH OF VITAL FORCE

The concept of the vital force is as fundamental within classical homeopathy. Homeopaths believe that medicines or remedies mobilize the vital force to orchestrate healing responses throughout the organism in a coordinated pattern, rather than by local actions on specific drug receptors in the physical body. The body translates the information of the vital force into local physical changes and hence recovery from acute and chronic diseases.

The homeopathic inference from finding an individual less adaptable to environmental stressors of many types is that the person has a weaker vital force. Given the lack of tools with which to make direct assessments, patients' symptoms and changes in symptoms are the primary, measure of the strength and specific expression of the vital force. Symptoms can be bio-psycho-socialspiritual in nature, typically including both disease-specific and nonspecific manifestations. Grasping patterns and themes of the symptoms is crucial to correct remedy selection. To evaluate vital force clinically, homeopaths synthesize their observations of a patient's appearance, verbal and nonverbal behaviors, resilience to daily hassles and major life events, personal medical status and history, family history, and capacity to live fully in joy and purpose. Homeopaths use the vital force as guide dose and treatment pace and to judge the likely clinical course and prognosis.

The homeopathic construct of "vital force" can be understood as an emergent property of the totality of an organism's interdependent system of living cells. this emergent property generates a selforganizing field for the organism as a whole. the life force field maintains the overall organism in its self-ness and resists environmental insults that might compromise the whole. The nonlinear dynamics inherent in complex systems capture the overall real-world functioning of living organisms more accurately than do the linear approximations.

At the same time, vital force is inherently a global or unitary property of an organism. As a result, a single-item, clinician-assessed global rating scale for vital force, modeled after those used extensively in clinical psychiatry and medicine research for overall outcome is a necessary first step. Evaluating the relationships of such a globalrating to various standardized questionnaires that address potentially relevant properties of the organism may facilitate more detailed characterization of vital force and development of new, multidimensional scales. To date, no previous homeopathic clinical research has attempted to examine these issues. The purpose is to create a homeopathic vital force to explore the strength of the vital force.

EXAMPLE :-

Nonalcoholic adults of both genders with a physician diagnosis of fibromyalgia(FM) were recruited from the Mumbai, Surat, and Delhi, communities by media announcements, newspaper advertisements, flyers in local health food stores, and word-of-mouth in patient support organizations. Excluded medications included steroid drugs, narcotic analgesics, and antihypertensives. Patients with serious comorbid medical (heart, lung, liver, kidney disease; diabetes; seizures; anaphylaxis history) or psychiatric (psychoses; acute suicidality) conditions, as well as nasal trauma were also excluded. Subjects were permitted to continue any long-term medications or other complementary medicine treatments that had been stabilized for at least 2 months prior to enrollment.

At baseline, prior to the treatment phase of the study, all patients underwent a 2 hour long in-depth homeopathic case-taking interview to determine the single individualized remedy deemed appropriate for them. Two experienced homeopaths from a pool of three practitioners (two physicians and one homeopathic medical assistant), all trained in a similar school of classical homeopathy and certified by the

Council for Homeopathic Certification [CCH]) had to agree on a specific remedy with a confidence of at least 7 of 10. At the end of the case-taking interview, the homeopaths each rated the patient's strength of vital force on a oneitem, on five-point scale (where 1 5 very weak, 2 5 weak, 3 5 moderate, 4 5 strong, 5 5 very strong). The homeopaths indicated that they included the following considerations in their assessment of vital force:exposure to suppressive treatments (e.g., steroid creams for skin rashes; antibiotics for recurrent strep throat), age, past medical history, family history, current freedom of expression, and center of gravity. To characterize each case, they identified a hierarchical center of gravity within the person (i.e., mental, emotional, physical plane, or indeterminate, at which the intensity of the case's pathology currently focused). Center of gravity may or may not have been the chief complaint or other concomitant symptoms that the patient considered immediately problematical. The center of gravity identifies the plane of being at which the homeopath judges symptoms to be the most limiting for the person in his freedom of functioning and quality of life.it can be believe that the vital force pushes the manifestations of disturbance in the organism as far to the periphery as it can (e.g., toward lower rather than upper extremities and toward less important rather than more important organs for survival). Generally, a mental center of gravity (e.g., thought disorder such as paranoia) suggests a weaker vital force than does an emotional center of gravity (e.g., generalized anxiety disorder), which in turn suggests a weaker vital force than does a physical center of gravity (e.g., asthma). Within a given center of gravity such as the physical plane, symptoms in a more important organ (e.g., lungs) suggest a weaker vital force than do those in a less important organ (e.g., skin). Finally, the homeopaths rated severity of the obstacles to cure , e.g., involvement in abusive relationships, adverse lifestyle habits, physical impediments (where 1 5 minimal, 2 5 mild, 3 5 moderate, 4 5 strong, 5 5 extreme).

All patients separately underwent a standardized history and physical examination by a conventional medical provider (rheumatologist) who was otherwise uninvolved in their care and blinded to results of the homeopathic evaluation. The homeopaths and the conventional medical provider independently completed a one-item Clinical Global Impression (CGI) severity rating after each visit (worded to ask for global assessment, taking into account the bio-psycho-social-spiritual aspects of the patient's current health, where 1 5 normal, not at all ill; 2 5 borderline ill; 3 5 mildly ill; 4 5 moderately ill; 5 5 markedly ill; 6 5 severely ill; 7 5 among the most extremely ill patients).

RESULTS :-

The overall sample of 62 patients with fibromyalgia was 94% female, with a mean age of 49 standard deviation(SD) 10 years and mean duration of fibromyalgia at 13.3 SD 12.7 years. The findings within each of the two pairings of the three homeopaths, respectively, for vital force ratings, r 50.83 and r 50.65; for obstacles to cure, r 50.83 and r 50.80; and for CGI, r 50.76 and r 50.84.

Consequently, the homeopaths' ratings were averaged for use in subsequent analyses. Averaged homeopathic vital force ratings for the patients were 2.9 SD 0.59. Mean vital force ratings correlated significantly with mean ratings of obstacles to cure (mean 2.7 SD 0.66) (r 5 20.33, p 5 0.005), but not with age (r 5 20.15, p 5 0.2) or FM duration (r 5 0.04, p 5 0.7). CGI ratings by homeopaths and the conventional medical provider correlated only weakly with one another (r 5 0.34, p 5 0.007). Although 33% of the 62 patients had unclear centers of gravity, 37.1% were assessed to have the primary focus of their symptomatology at the physical plane, 24.2% at the emotional plane, and 3.2% at the mental plane. Homeopaths rated patients whose center of gravity fell within mental or emotional

planes as significantly lower in vital force strength compared with patients whose center of gravity fell within the physical plane. The four strongest correlations were for vital force with the homeopaths' averaged CGI ratings, POMS mental confusion (stronger vital force associated with lower confusion), POMS vigor (stronger vital force associated with greater vigor), and the Positive States of Mind score. Using only the four variables with the strongest correlations, stepwise multiple regression tests showed that the homeopaths' CGI rating accounted for 32% and POMS vigor for an additional 8.5% of the variance in vital force ratings. If homeopathic CGI ratings were not used in the regression analysis, then POMS confusion alone, of the remaining three variables, accounted for 14% of the variance in vital force. Notably, vital force did not correlate with pain ratings. Weaker correlations occurred between higher vital force ratings and greater patient self-ratings for global health, FACIT emotional well-being, sense of coherence, and powerful-others health locus of control. Increased social desirability also correlated weakly with homeopathic ratings of a stronger vital force. However, social desirability scores did not correlate significantly with either homeopaths' or conventional medical provider's CGI ratings.

6.VITAL FORCE IN CURE

Vital force has a tendency to fight against any morbid force. In the diseased condition,the vital force tries to fight with the miasmatic forces and free the organism from its inimical acts. In some cases of acute diseases, the vital force can overcome the inimical forces without medicinal aid. But in this process of recovery, vital force sacrifices some vital energy or vital organs to the miasmatic force.

Hence, Hahnemann called vital force an unintelligent force. On the contrary, in some fatal acute diseases vital force is unable to fight against the morbid forces, as they are more powerful than the vital force. In such conditions, vital force requires medicinal help. Without medicinal help in these cases, the vital force deranges and leads to the death of the patient.

The nature of chronic miasm is entirely different from that of acute miasm. Chronic miasmatic forces are more dangerous; they can even run from generation to generation. Hence in chronic diseases, the vital force alone is unable to control the stronger miasmatic forces. In chronic diseases, medicinal aid is mandatory. Vital force hints a its suffering to the physician in the form of signs and symptoms. Based on this symptomatic totality, the intelligent physician administers homeopathic remedy.

Homeopathic remedy has to be given in such a manner that the medicinal force is always powerful than the miasmatic force. When such action is taken: the deranged vital force initially remains passive and allows stronger medicinal force to remove the weaker miasmatic force. The medicinal disease force being artificial becomes weaker when cease the repetition of the remedy further.

In such conditions, the vital force easily overcomes the medicinal force and also becomes free from both miasmatic and medicinal force. Thus, it regains its energy and restores the disturbed harmony of the organism.

7.VITAL FORCE IN MODERN APOCH

Vital force is energy or a spirit like force which animates the human body in harmonious manner. It is dynamic in nature .It can be deranged when some external influence attacks the material body and vital force goes in diseased conditions .A homoeopathic medicine will be administered to cure the human body. This vital force is related to modern concepts of torque, spin rotation, quantum field, and gyroscope to ensure the presence of vital force in the body which helps to regulate the body.

Vital forces –Quantum theory:-

The quantum theory was related to vital force. So vital force can create or break quantum field .if it breaks, the disease were develop then homoeopathy remedies was administered which create the broken quantum field again. The process go on. The practicle and forces of quantum matter and force field are visualized by the spacetime feynnmann diagram so if in homoeopathy curative remedy restore the broken symmetery. It can be represented as feynmann –like diagrams. It concludes that there is a similarity between the homoeopathy and quantum theory which is useful for modeling the homoeopathy process.

Vital forces –Quantum Methphor:-

The Thereapeutic encounter are described based on Quantum mechanical model of adaptive mutation and Illuminated geometric pattern generated by a light source attach to spinning gyroscope. In this the PPR generated a quantum like superposition of the patient unwell and well through a thereapeutic process called Quantum mechanical model of adaptive mutation. The light beam of an eclipse when it covers the whole angular momentum it means it represents the less precess (Healthy state) and when the gyroscopic spin is decreasing it increases the precess (unhealthy state). This precess represents the vital force in healthy and in diseased state. When vital force is in diseased state or increases the precess the ecllips of spin decreases. Some changes took place in the body after administer the remedy the circular motion of the gyroscope spin form and circulate a curative state and vital force comes in healthy state. The two new metaphor is equllavent to the cure. ***Vital forces:-Concept of spin:-***

The examination of the concept of spin can be use as a metaphor for understanding the operation of vital force. This concept came from nuclear magnetic resonance (NMR) to investigate difference in the parameters called spin –spin relation with time to know the concept of water between homeopathically prepared and non homoeopathic prepared solutions. There is no difference were observed in homoeopathic and non homeopathically prepared solutions. The vitalist notions which are philosophically basis on many CAM which are discrediated by the current medical model. The ancient idea of vital force were amended by the modern complexity theory. So the gyroscopic metaphor here developed might be useful for the beginning to think about vital force. ***Vital forces-torque like action:-***

Quantum macroentanglment is a mathematical model of vital force which has been recentely formulated. it describes the vital force in terms of gyroscope with quantitised angular momentum represent vital force in a state of health in terms of wave function. The gyroscope with quantitised angular momentum represent the state of health and disease in terms of vital force. vital force in terms of gyroscope represents as a barking torque (disease) decreases the angular momentum which shows precess (express symptoms) When a thereapeutic remedy is administered it increases the angular momentum and decreases the precess i.e reduced symptoms expression the remedy administer accelerates the torque and gyroscope cover his angular momentum. if vital force is in diseased state it disturb the angular momentum and shows the precess and the thereapeutic remedy completes the angular momentum and less the precess of vital force. ***Vital forces & gyroscopic model:-***

Theory was assumed on Cartesian theory it applies double blind placebo control trials were conducted ,then we get the precess of the patient & it correlates with the gyroscopic concept this pepar was published to know the effects of homoeopathic medicine which is considered as placebo in todays world. Homoeopathy was explained by Non locality, Complemetarity & entanglement in the previous researches. As per the Dr. Hahnemann vital force was well explained but cannot be seen or perceived but naked eyes so, there are so many challenges against the homoeopathy by the modern medicine. they assumed that gyroscope was full of energy when it was moving against the object then it created there own spin (angular momentum), as per the energy they received. If some obstacle comes in between the spinning of gyroscope it reduces his speed (less angular moment) & shows the minor effects. when this concept was correlated with Homoeopathy, when

a person get diseased we prescribe a well suitable homoeopathic remedy, according to there susceptibility which is acted on vital force of person, but if the selected potency were not correct according to the conventional laws of homoeopathy it reduces the effect of energy transformed in the patients body in the form of homoeopathic remedy.this process in terms of electrons (which is bounded with energy) the energy in the particles were cover there path & revolves around the atoms, as per the time in terms of energy.

Conclusion:-

Every living individual has a vital force inside his body which regulates the human body which cannot be seen but can be perceived. It is in the form of energy which is regulates the body in a systematic manner when is in healthy state but if any exciting or maintaining factors interrupt this it shows some symptoms in the form of a disease and vital force is weaker in the body because of the disease. when a homeopathically medicine is administered in the body or removal of the symptoms takes place vital force regains its health and physiological process of a human being goes in a harmonious manner. As per studied various literature and previous researches we can assume that vital force is an energy which cannot be calculated but it is present in the body which regulates the body and covers its path in a regular motion when in healthy state we consider it in the form of pendulum, spin, rotating objects etc. if a force is applied on it will increases his speed or may be decreases according to the motion or force applied on it. it has a regular motion which is in there healthy state when some disturbance is created it may be decreases or increases its rotation which can be seen in terms of symptoms which present at physical or mental level or may be physiological or pathological which is all based on patients susceptibility. When a homoeopathic well selected remedy is administerd it will

affect the vital force in the form of energy which is called potency in homoeopathy and remedy is called force. So the vital force which shows some disease symptom or divert from his own path will recover by the help of medicine administered and intensity of symptoms reduced and gradually vital force covers its own path in a regular manner and patients is cured. We can also say that some high technology will calculate the energy and how this whole process is going on in the body will be measured because our homeopathically medicines are diluted in nature and it is in the forms of nano particles. We can also say that homoeopathy is not placebo it has medicinal effect which is highly diluted & considerd in terms of small particles or energy. As per the previous studies homoeopathy compared, vital force with the new models in the physics, mathematics & modern science which takes several years to prove and it needs to be working on it. So it can be said that homeopaths needs to improve technique and studies with the modern technologies in this contemporary era.

8.VITAL FORCE AND THERMODYNEMICS

"The material organism, without the vital force, is capable of no sensation, no function, no self-preservation, it derives all sensation and performs all the functions of life solely by means of the vital force, which animates the material organism in health and in disease."

"Material organism is dead, and only subject to the power of the external physical world; it decays, and is again resolved into its chemical constituents in absence of vital force."

THERMODYNAMICS:-

Thermodynamics is a collection of laws and principles describing the flow and interchange of heat, energy and matter in a system of interest.

The First Law of Thermodynamics states: "***The total amount of energy in an isolated system is conserved, though the form of the energy may change."***

The Second Law of Thermodynamics states: "***In all natural processes, the entropy of the universe increases."***

Entropy is a measure of disorder in a system. A system with order and complexity has low entropy. As the complexity and order decreases, entropy of a system increases. The second law indicates that nature tends to go from order to disorder, from complexity to simplicity.

In Thermodynamics, the 'system' is the portion of the universe we are concerned with; everything else is the surroundings. ***The system + surroundings = universe***

There are three types of systems – **closed, isolated and open**. In a closed system, the system does not exchange matter or energy with the surrounding. In an isolated system, energy exchange can occur between the system and the surrounding but the matter is not exchanged. In an open system matter and energy are freely exchanged between the system and the surrounding.

If the second law of thermodynamics is universally true, then the complex evolution of life and Darwin's theory cannot be true. Every system in the universe tries to be simple, to increase its entropy. Still life has evolved as complex systems that are difficult to attain thermodynamically. Most physicists still feel that **Proteins, RNA and DNA** are of such high complexity that they can only be produced by existing cells and the spontaneous evolution of life theory is still considered suspect, because thermodynamically the probability of spontaneous production of highly complex systems in nature is considered next to nil, especially if the second law of thermodynamics has to hold true.

Living systems are composed of complex molecular configurations whose total bonding energy is less negative than that of their chemical precursors and whose thermal and configurational entropies are also less than that of their chemical

precursors. Thus, the Gibbs free energy of living systems is quite high relative to the simple compounds from which they are formed. The formation and maintenance of living systems at energy levels well removed from equilibrium requires continuous work to be done on the system. Securing this continuous work requires that energy and/or mass flow through the system, apart from which the system will return to an equilibrium condition with the decomposition of complex molecules into simple ones.

In living plants, the energy flow through the system is supplied principally by solar radiation. This solar energy is converted into the necessary useful work to maintain the plant in its complex, high-energy configuration by a complicated process called photosynthesis. Mass, such as water and carbon dioxide, also flows through plants, providing necessary raw materials, but not energy.

For animals, energy flow through the system is provided by eating high energy biomass, either plant or animal. The breaking down of this energy-rich biomass, and the subsequent oxidation of part of it (e.g., carbohydrates), provides a continuous source of energy as well as raw materials. If plants are deprived of sunlight or animals of food, dissipation within the system will surely bring death. Maintenance of the complex, high-energy condition associated with life is not possible apart from a continuous source of energy.

FACTS:-

1. Human beings (all the living organisms) are the complex open thermodynamic systems.

2. Thermodynamic systems are never in a state of equilibrium. They continuously exchange mass and energy with their surroundings.

3. It takes lot of energy to maintain complex living systems in a state of low entropy.

RELATION WITH VITAL FORCE :-

If you consider the human body as an open thermodynamic system, then Vital Force is that essential energy system that is required to maintain this complex biological system in its low entropy state.

This energy system has all the characteristics of Vital Force that Hahnemann has suggested. It maintains and preserves the life; it provides the energy for all sensations and functions and if the Vital Force (or this thermodynamic energy system) is disturbed or diminished, the system shifts towards a more disorderly state, leading to an increased probability of disturbance at the biological level – a process that we term as ***"disease".***
